

The IRISPCI dual axis controller combines high processing power with ease of use. This controller is able to drive stepper motor actuators up to 5Mpulse/sec and features encoder inputs up to 10 MHz for closed loop applications.

Custom hardware and firmware configuration options are available even with volumes as low as 100 pcs/yr.

## OEM CNC CONTROLLERS

Fox is a highly customizable controller core developed to control and synchronize 2 brushless and 2 stepper motors.

Where space saving and function integration are mandatory requirements, the Fox controller featuring integrated motor drivers and many different I/O types is the solution.

The Fox controller can be easily arranged with a wide choice of custom peripherals and firmware functions to match your application.
